Profile

Future Computer Science Engineer (5th Year), seeking to transform an internship into an opportunity for concrete contribution and innovation.

My journey stands out due to a **dual expertise**:

- I initially gained expertise in **telecommunication** and **mechanics** (National Engineering Diploma, Tunisian Air Force).
- I am currently enriching this background with a **Computer Science Engineering** Diploma, preparing me to **design, develop, and optimize** modern systems.

I am looking for an internship where I can apply my technical expertise in the areas of Cloud, DevOps, AI, Security, and Web Development. I aim to make an immediate and significant contribution to the optimization and security of your systems, leveraging my unique dual training.

Education

TEK-UP University of Digital Sciences <i>Final-Year Computer Sciences Engineering Student</i>	Sep 2024 - Currently <i>Ariana</i>
Aviation School of Borj El Amri (EABA) <i>National Engineering Diploma in Telemechanics / Aviation Sciences</i>	Sep 2016 - Jun 2019 <i>Manouba</i>
Aviation School of Borj El Amri (EABA) <i>Pre-engineering , Physics - Technology</i>	Sep 2014 - Jun 2016 <i>Manouba</i>

Technical Skills

Development Languages: Php, Python, Java, JavaScript, TypeScript
Frameworks/Technologies: Angular, React.js, Spring Boot, Nodejs, Symfony 6, .NET
Data Basis: MySQL, SQL Server, MongoDB
DevOps Tools: Git, GitHub, Docker, Kubernetes, Jenkins, Gitlab
Cloud & Infrastructure: Amazon Web Services (AWS)
Operating Systems: Linux, Windows
IA & Machine Learning: Deep Learning (DL), Machine Learning (ML)

Experience

TEK-UP University <i>DevOps Engineer Internship</i>	Jul 2025 - Sep 2025 <i>Ariana</i>
• Implemented a robust (CI/CD) pipeline for a web application, integrating DevSecOps practices to embed security throughout the development lifecycle. • Successfully automated security testing, vulnerability management, and deployment workflows, significantly enhancing code quality. • Deploy and configure monitoring tools (Prometheus, Grafana) ensuring system reliability and proactive issue detection.	

Academic Projects

Support ticket management system <i>Angular, Nodejs, Express.js, MongoDB</i>	Jan 2023
• Developed a website for managing support tickets in a school, based on RESTful API architecture built with Nodejs. • Implements users roles with appropriate dashboards and permissions.	
Movies streaming platform <i>Java, Spring Boot, Angular, MySQL</i>	Jan 2024
• Developed an interactive streaming platform that allows users to browse and watch movies with an intuitive interface. • Implementation of RESTful APIs to manage CRUD operations.	
Smart coworking space bookings <i>Node.js, Apollo Server, MongoDB, Angular</i>	May 2024
• This is a highly efficient GraphQL API for managing coworking space bookings. • Implement a robust solution that eliminates scheduling conflicts.	

Online shopping website | *Symfony, MySQL*

Nov 2024

- This project is a Symfony-based web application designed to manage a flower shop.
- It provides features for managing products, categories, orders, and user authentication.

Drone monitoring system | *Deep Learning, Python, Opencv, YOLOv3*

Jun 2019

- This project is a platform capable of communicating with a drone and processing its video stream at a ground station for the purpose of detection.
- It Exploited Deep Learning (YOLOv3) to address the detection of illicit objects (intrusions).

CERTIFICATIONS

- Python Essentials 1 + 2, Cisco Networking Academy
- GitHub Foundations, DataCamp

Languages

French : Fluent; **English** : Fluent.
